### **The next big thing in tech: Augmented reality - CNET**

Augmented reality (AR) is an interactive experience of a real-world environment where the objects that reside in the real world are enhanced by computer-generated perceptual information, sometimes across multiple sensory modalities, including visual, auditory, haptic, somatosensory and olfactory. AR can be defined as a system that fulfills three basic features: a combination of real and ...

### **Augmented reality - Wikipedia**

Augmented reality and virtual reality technologies have stepped off the shelf – almost literally – and into our eyes and brains. The idea that these powerful modes of transmission were limited to entertainment alone is long gone. Several industries are already implementing hands-on versions of these technologies into their daily practices.
