When you get a big set of data there are all sorts of ways to mathematically describe the data. The term "average" is used a lot with data sets. Mean, median, and mode are all types of averages. Together with range, they help describe the data.

Kids Math: Mean, Median, Mode and Range

To calculate the range, you would subtract 3 from 44, giving you a range of 41. $44 - 3 = 41$ Once you've mastered the basics of mean, median, and mode, you can begin to learn about more statistical concepts. A good next step is studying probability, the chance of an event happening.

Calculating the Mean, Median, and Mode - ThoughtCo

Mean, median and mode are all measures of central tendency in statistics. In different ways they each tell us what value in a data set is typical or representative of the data set. The mean is the same as the average value of a data set and is found using a calculation. Add up all of the numbers and divide by the number of numbers in the data set.
