Scientific Computing: An Introductory Survey
solution vector x is quite sensitive; it is sometimes close to $[0,1]$ and sometimes close to $[1,0]$! The solution to a (nondegenerate) linear programming problem must occur at a vertex of the feasible set. In our unperturbed problem there are three vertices: $[0,1]$, $[1,0]$, and $[0,0]$. Since the gradient of $c^T x$ is almost parallel to the
